

SIVAVETRIVEL M

Junior Data Engineer | ETL Developer & Tester

Chennai, Tamil Nadu | 8248736004 | vetri1998kpr@gmail.com | linkedin.com/in/sivavetrivel-m | github.com/VETRI1998

PROFESSIONAL SUMMARY

ETL Developer with 1+ year of hands-on industry experience building and validating scalable cloud-based ETL pipelines across 3 source systems, using AWS S3, Databricks, and Delta Lake. On the development side, skilled in designing full and incremental (delta) data pipelines and Jenkins CI/CD automation that cut deployment time by ~50%, plus Databricks SQL-based data processing. On the testing side, authored test cases and source-to-target mapping documents, applying requirement-based data validation to verify accuracy and quality across pipeline outputs. Comfortable moving between building pipelines and rigorously testing them, with strong collaboration across Salesforce, QA, and business teams in Agile Scrum environments using Jira. Core strengths include ETL Development, ETL Testing, Data Validation, Test Case Design, Requirement Analysis, Cloud Data Engineering, Data Quality Assurance, and Pipeline Automation.

TECHNICAL SKILLS

Programming Languages	Python, SQL, JavaScript, HTML, CSS
Cloud & Big Data	AWS (S3, EC2, Lambda, Glue, IAM), Databricks, Delta Lake, Databricks Asset Bundles, Databricks SQL
Databases	MySQL, SQLite
DevOps & Collaboration	Jenkins CI/CD, Git, Jira, Agile Scrum, Sprint Planning, Backlog Grooming, Visual Studio Code
Integration & Automation	Salesforce Integration, Data Ingestion & Transformation, Workflow Automation, Pipeline Monitoring
ETL Testing & Quality Assurance	Test Case Design & Execution, Source-to-Target Mapping, Data Validation & Reconciliation, Requirement Traceability, Defect Tracking & Root Cause Analysis, Regression Testing, UAT Support

PROFESSIONAL EXPERIENCE

Junior Data Engineer

Jul 2025 – Present

DataKalamIT Pvt. Ltd. — Chennai, India

- Design, develop, and maintain scalable ETL pipelines integrating data from 3 source systems, using AWS S3, Databricks, and Delta Lake to support enterprise analytics requirements.
- Execute full-load and incremental (delta) data processing workflows handling multi-GB datasets across 2 environments (Dev and Production), ensuring data consistency and reliability.
- Build and optimize Jenkins CI/CD pipelines for automated deployment and workflow orchestration, cutting deployment time by approximately 50%.
- Worked across 25+ ETL pipelines, performing data quality checks to ensure accuracy across pipeline outputs.
- Work with Databricks Asset Bundles for deployment automation and configuration management across 2 environments.
- Track tasks, defects, and sprint deliverables using Jira within an Agile Scrum environment, participating in sprint planning and backlog grooming across 15+ sprints.

- Prepared detailed test cases and test scenarios covering 3 source systems for ETL pipeline validation based on business requirement documents.
- Developed source-to-target mapping documents covering 3 source systems to validate data transformation logic against business requirements.
- Performed ETL testing including schema verification, record-count reconciliation, and data completeness/accuracy checks across full and incremental (delta) loads in 2 environments.
- Validated Jenkins deployment jobs, contributing to a ~50% reduction in deployment turnaround time prior to release sign-off.
- Logged, tracked, and resolved ETL defects and enhancements in Jira across 15+ sprints, maintaining sprint task progress and requirement traceability.
- Prepared and maintained technical documentation, test validation reports, and deployment-related quality records across 2 environments for stakeholder review.

PROJECTS

Automated Data Pipeline for Business Analytics

Tech Stack: AWS S3, Databricks, Delta Lake, Jenkins, Databricks SQL

- Designed and implemented scalable ETL pipelines to ingest structured and semi-structured data from 3 source systems.
- Applied full-load and incremental (delta) ingestion strategies for efficient processing of multi-GB datasets.
- Automated workflow orchestration using Jenkins, cutting manual operational effort and deployment time by approximately 50%.
- Used Databricks Asset Bundles for deployment automation, configuration management, and workflow handling across 2 environments.
- Implemented Databricks SQL validation rules and test cases to ensure data quality, accuracy, and reliability throughout the pipeline lifecycle.
- Delivered analytics-ready, tested datasets integrated with Salesforce reporting systems for business consumption.

EDUCATION

Bachelor of Engineering – Computer Science & Engineering

2025

Sardar Raja College of Engineering, Anna University

Diploma in Computer Engineering

2022

MSPVL Polytechnic College, DOTE
